

cleaning [fluid] liquid; and

means to interconnect the cleaning head and a vacuum source.

Claim 2 (amended). A floor, wall or upholstery cleaning tool for use in conjunction with a source of cleaning [fluid] liquid and a vacuum source comprising:

means interconnecting the tool to the [fluid sources] liquid source;

exterior envelope means and interior supply means wherein the exterior envelope has a substantially uniplaner lower surface [which] wherein the envelope means defines a substantially enclosed area of the floor when in contact therewith and is connected to the vacuum source and the supply means is

*B* interconnected with the source of cleaning [fluid] liquid, *and interior supply means* provides an elongated bottom lip substantially uniplaner with the lower

*B* surface of the envelope *means* and is configured such that the [fluid] liquid is selectively applied to the floor as a thin film which

*B* flows over the bottom. *lip*

*A'* Claim 3 (amended). A tool as in claim 2, wherein the supply means is tabular and includes an elongated slot in its lower surface for delivering the cleaning [fluid] liquid.

*B* Claim 5 (amended). A tool as in claim 2, wherein the supply means comprises a downwardly open narrow slot with its lower opening substantially in the same plane as the bottom surface of the envelope, *means* one side of which includes an inwardly projecting foot.

*A 2* Claim 6 (amended). A cleaning head adapted to be used with a source of cleaning [fluid] liquid and a vacuum source for cleaning a floor, wall or upholstered surface, comprising:

a lower surface contact area defined by a lip surrounding an opening through which a vacuum is applied for removing fluid and entrained soil; and

a [fluid] liquid supply means adjacent the lip, including an angled delivery slot, causing the [fluid] liquid to flow in a sheet over the lip and into the vacuum.
